**Paper Title:** Evaluating The Financial Implication of Power Harmonics on Electricity Corporation of Ghana (ECG)’s Distribution Networks and Customers
Abstract: The survival and sustainability of businesses, especially in volatile developing country markets, require that businesses frugally manage input cost such as the cost of electric power. However, Power Harmonics (PH) that cause excessive dissipation of energy as heat can raise the cost of electric power for companies and for the power suppliers as well. Unknown to them, many businesses in Ghana may have been exposed to serious financial losses as a result of the presence of power harmonics in the distribution network. Such PH is essentially a negative externality caused by the users of PH producing gadgets and visited on other unsuspecting users of electric power who are essentially bystanders: a classic case of a negative externality. PH is a major contributor to the poor state of power quality internationally and have been in existence since the first alternating current generator went online more than 100 years ago. This paper presents an analysis of the financial implication of power harmonics in the distribution network of the Electricity Company of Ghana (ECG) and on customers of the company using a mixed methodology of qualitative and quantitative approaches. The results from the power system monitoring carried out confirm the presence and deleterious effects of power harmonics in the distribution network. Unfortunately, most customers are not aware of the negative effects of power harmonics. Differentiating the effect of PH from other poor power quality issues has cost consequences for most customers. Analysed results from the power system monitoring carried out shows that more than GHS2,396,814.00 ($1,261, 481.00 at an exchange rate ($/Ghs) of 1.9 in 2012) per annum is wasted as heat in the distribution network. There is therefore the need to introduce punitive measures against the generation of harmonics into the distribution system in order to incentivise the promulgators of PH to internalize the externality. This will ensure the survival and sustainability of businesses in Ghana’s volatile and under-resourced industrial sector.

Paper Title: Experimental Utilization of 2-Ethoxy Ethyl Acetate as a Blend in a Single Cylinder CI Engine

Abstract: In this investigating study diesel fuel was used as a reference fuel for 2-Ethoxy Ethyl Acetate –diesel blends. The blends containing 5, 10 and 15% of 2-Ethoxy Ethyl Acetate fuel by volume are tested on test rig developed for the experimentation. All the tests were conducted in steady state and were set at constant engine speed 1500 RPM. With the addition of oxygen in the fuel, it has been observed that the emission contents reduce remarkably. Moreover there is an increase in the Brake Horse Power and Brake Thermal Efficiency of the engine. So it can be concluded that the addition of 2-Ethoxy Ethyl Acetate by 10% in diesel not only helps to reduce the exhaust emission but also increases the performance of the diesel engine. 10% blend increases the BHP by 7.6% and BTE increases by 7.2 % at full load conditions. Also this blend ration decreases the CO % by 16%, HC by 11.9% and Smoke Opacity reduces by 19.11%. The experimental results prove that the use of 2-Ethoxy Ethyl Acetate fuel as a blend improves the engine operation and reduces the environmental pollution.

Keywords: 2-Ethoxy Ethyl Acetate, Oxygenated fuel, Diesel engine, Engine emission, Exhaust smoke, Carbon monoxide, Carbon dioxide, Hydrocarbon.

Experimental Studies on Heat Transfer Augmentation of a Heat Exchanger with Swirl Generators Inserts

Abstract: Convective heat transfer characteristics within a heat exchanger with twisted tapes of different cuts and materials have been investigated experimentally. Effect of twisted tape of different cuts (square, circular and triangular) inside the inner tube of single unit on heat transfer and friction factor for heating of water for Reynolds number range 500-3000 was studied experimentally. The results obtained from the twisted inserts of GI, Al and Cu materials are compared and the experimental results reveal that the among the three different materials of inserts, Copper inserts performs better and too with square cuts.

Area Optimized and Low Power using Modified Booth Multiplier for Unsigned Numbers

Abstract: Power consumption and small area is very important for fabricating DSP system and high performance system, requirement of present scenario computer system is dedicated for very high speed and low power unique multiplier unit for signed and unsigned number therefore in this paper focus on unsigned number by using modified booth multiplier. The unsigned 4 bit and 8 bit implementation done by some modification in booth multiplier modified booth multiplier come out to make efficient multiplier reduce N/2 partial product. The parallel multiplier 4 bit and 8 bit modified booth multiplier does the computation using lesser adder and lesser iterative step. The implementation of unsigned 4 bit and 8 bit done in Xilinx ISE Design suite 12.1 tool by using VHDL, model Sim.

Keywords: Array Multiplier Booth multiplier, Modified Booth Multiplier, Model Sim, Partial Product, Unsigned, VHDL, Xilinx.

Abstract: Today increases any wireless communication security is crucial during data transmission. The encryption and decryption of data is the main challenge faced in the wireless communication for security of the data transmission source to destination. In this paper we present the literature study of cryptography security AES algorithm and its present application in communication, data communication and wireless communication. In this paper, we use the Advanced Encryption Standard (AES) which works on a 128 bit data encrypting it with 128 bits of keys for ensuring security. In this paper literature study of AES algorithm and selection AES algorithms for wireless communication application and design verilog AES sub block add round key, mix column, s-box using Xilinx ISE 9.1i software for a Spartan3 FPGA device

Keywords: Advanced Encryption Standard (AES), Rinjdael, Cryptography.

Paper Title: Clutter Removal for RADAR Wind Profiler using Wavelet Thresholding

Abstract: Atmospheric Signal processing has been one field of signal processing where there is a lot of scope for development of new and efficient tools for cleaning of the spectrum, detection and estimation of the desired parameters. The field of digital signal processing is a very active area for research and applications. Atmospheric signal processing deals with the processing of the signals received from the atmosphere when manually stimulated using atmospheric Radar. Removal of clutter in the radar wind profiler is the utmost important consideration in radar. In this paper, we implement wavelet thresholding for removing clutter from wind profiler Radar data. By applying the concept of discrete multi-resolution analysis and non-parametric estimation theory, we develop wavelet domain thresholding rules, which identify the coefficients relevant for clutter and suppress them and increases the accuracy of wind vector reconstruction.

Keywords: Clutter, Signal Processing, Wind Profiler, Wavelet Thresholding.
