Editor In Chief
Dr. Shiv K Sahu
Ph.D. (CSE), M.Tech. (IT, Honors), B.Tech. (IT)
Director, Blue Eyes Intelligence Engineering & Sciences Publication Pvt. Ltd., Bhopal(M.P.), India

Dr. Shachi Sahu
Ph.D. (Chemistry), M.Sc. (Organic Chemistry)
Additional Director, Blue Eyes Intelligence Engineering & Sciences Publication Pvt. Ltd., Bhopal(M.P.), India

Vice Editor In Chief
Dr. Vahid Nourani
Professor, Faculty of Civil Engineering, University of Tabriz, Iran

Prof.(Dr.) Anuranjan Misra
Professor & Head, Computer Science & Engineering and Information Technology & Engineering, Noida International University, Noida (U.P.), India

Chief Advisory Board
Prof. (Dr.) Hamid Saremi
Vice Chancellor of Islamic Azad University of Iran, Quchan Branch, Quchan-Iran

Dr. Uma Shanker
Professor & Head, Department of Mathematics, CEC, Bilaspur(C.G.), India

Dr. Rama Shanker
Professor & Head, Department of Statistics, Eritrea Institute of Technology, Asmara, Eritrea

Dr. Vinita Kumari
Blue Eyes Intelligence Engineering & Sciences Publication Pvt. Ltd., India

Dr. Kapil Kumar Bansal
Head (Research and Publication), SRM University, Gaziabad (U.P.), India

Dr. Deepak Garg
Professor, Department of Computer Science and Engineering, Thapar University, Patiala (Punjab), India, Senior Member of IEEE, Secretary of IEEE Computer Society (Delhi Section), Life Member of Computer Society of India (CSI), Indian Society of Technical Education (ISTE), Indian Science Congress Association Kolkata.

Dr. Vijay Anant Athavale
Director of SVS Group of Institutions, Mawana, Meerut (U.P.) India/ U.P. Technical University, India

Dr. T.C. Manjunath
Principal & Professor, HKBK College of Engg, Nagawara, Arabic College Road, Bengaluru-560045, Karnataka, India

Dr. Kosta Yogeshwar Prasad
Director, Technical Campus, Marwadi Education Foundation’s Group of Institutions, Rajkot-Morbi Highway, Gauridad, Rajkot, Gujarat, India

Dr. Dinesh Varshney
Director of College Development Counseling, Devi Ahilya University, Indore (M.P.), Professor, School of Physics, Devi Ahilya University, Indore (M.P.), and Regional Director, Madhya Pradesh Bhoj (Open) University, Indore (M.P.), India

Dr. P. Dananjayan
Professor, Department of Department of ECE, Pondicherry Engineering College, Pondicherry,India

Dr. Sadhana Vishwakarma
Associate Professor, Department of Engineering Chemistry, Technocrat Institute of Technology, Bhopal(M.P.), India

Dr. Kamal Mehta
Associate Professor, Deptment of Computer Engineering, Institute of Technology, NIRMA University, Ahmedabad (Gujarat), India

Dr. CheeFai Tan
Faculty of Mechanical Engineering, University Technical, Malaysia Melaka, Malaysia

Dr. Suresh Babu Perli
Professor & Head, Department of Electrical and Electronic Engineering, Narasaraopeta Engineering College, Guntur, A.P., India

Abstract: Internet banking is becoming increasingly important to banks in providing convenient banking services to customers. To attract and retain their customers, banks ensure security measures are put in place to protect the customers from various cyber attacks. Despite these security measures, customers are constantly being exposed to fraud and security issues. This paper therefore seeks to understand the reasons behind these security breaches and to develop a model to predict the behaviours of internet banking customers. Drawing on Health Belief Model, this paper employed chi-square and logistic regression analysis to specifically investigate internet banking security issues from human behavioural perspective. The study empirically revealed that there is a direct relationship between internet banking security breaches and customer behaviours. A predictive model was however developed to predict these human behaviours on internet banking platforms. The study concluded that internet banking security breaches are mainly due to human behaviours such as unlocking computers when not in use, installation of softwares from sources that are not trusted and supported, poor password management, and other related behaviours that could be prevented by customers. It was also concluded that there is no relationship between customers’ age group and internet banking security breaches. It is therefore by chance that the younger respondents experience internet banking security issues more than the elderly. This chance could be attributed to the fact that the younger ones do not have valuable cash deposits to protect and hence not cautious in their behaviours on internet banking platforms. The findings of this study have important policy implications for banks, thereby helping to understand the behaviour of customers on internet banking platforms. It is therefore recommended for banks to educate and organise regular and continuous security awareness programmes for their customers.

Keywords: Internet Banking, Behaviours, Security.

Abstract: The paper concerns the design of a new methodology for diagnosis by Luenberger Observer using the Bond Graph. The observer design provides a state estimated from the model and inputs and outputs measurements. Furthermore, we have exploited the architectural of the Bond Graph to generate the diagnostic condition based on Luenberger observers. Furthermore, the performance of the proposed diagnosis system is studied by these residuals to the certainties and faults. The research results have been applied to an industrial process RODS (Reverse Osmosis Desalination System) of Research and Technology Center of Energy Borj Cedria. In this context, the proposed method was operated from the modeling step to the diagnosis system step.

Keywords: Diagnosis, Luenberger Observer, Bond Graph, Reverse Osmosis Desalination System

Abstract: In rural areas and old age homes, the unhealthy persons need a constant monitoring of their body. In the present work the physiological parameters such as Heart beat, Body temperature, ECG, Smoke detection and brain tumor detection are obtained, processed and displayed in an android application. Monitoring and control of all the specified parameters are done using particular sensor for each parameter. These sensors are not harmful to human body as they are sensitive to infrared rays. If anyone of the vital parameter goes out of normal range then an alert message is generated and sent by the system via GSM/GPRS module to the authorized mobile numbers. Thus, it reduces the doctor’s work and also gives reliable results. Whenever there is an abnormality felt by the patient, the
Use of adulterated fuels has been escalating over the years due to lack of appropriate analytical tools for rapid detection resulting in detrimental effects to motor engines, environment and to the economy. Kerosene is a widespread adulterant added to gasoline and diesel. It is extensively used because of its financial gains and ease of blending. In this study attempt has been made to develop a combination analytical tool for rapid detection of kerosene adulteration by evaluating samples of gasoline and diesel; determining the adulteration intensity; compare detection limits of Fourier Transform Infrared (FTIR) and Fluorescent Indicator Adsorption (FIA); then evaluate detection aptitude of the methods. Suspected adulterated gasoline and diesel were collected systematically in seven selected locations within Eldoret, Kenya. References were traced from Eldoret pipeline depot up to the shipper’s dispensing station. Arrays of six blend mixtures of kerosene with either gasoline or diesel were prepared as custom proportions for comparison as adulteration contour. Density tests, fractional distillation, FIA and FTIR spectroscopy were carried out for characterization. Results showed appreciable density variation at different levels with the lowest density of 0.7373 and 0.8199 Kg/l obtained for gasoline and diesel respectively compared to 0.7374 and 0.8345 Kg/l for the standards which implied an element of adulteration. Fractional distillation provided exhaustive results qualitatively as it was able to classify samples as olefins, saturates and aromatics. The study therefore fronts rapid detection resulting in detrimental effects to motor engines, environment and to the economy. Kerosene is a widespread adulterant added to gasoline and diesel. It is extensively used because of its financial gains and ease of blending. In this study attempt has been made to develop a combination analytical tool for rapid detection of kerosene adulteration by evaluating samples of gasoline and diesel; determining the adulteration intensity; compare detection limits of Fourier Transform Infrared (FTIR) and Fluorescent Indicator Adsorption (FIA); then evaluate detection aptitude of the methods. Paper Title: Video to Image Conversion Techniques Video Frame Extraction

Abstract: The video is electronic Media for broadcasting, watching, recording, advertising, sharing and displaying visible effect. A key component of the video is Image; the standard term for the image is the frame. A powerful application of video is indexing, summarization, browsing, online video database analysis these all need for converting the video into a number of the frame. This paper has given a technique for the video to frame extraction with the help of MATLAB platform. This project help today's demand like social media (WhatsApp and facebook), video lecture distribution, and surveillance system

Keywords: frame; group of picture; frame rate; video format; video type; pixel; aspect ratio, digital and analog video, video resoulation.

Paper Title: Mimicking the Movements of the Human Hand using Leap Motion Sensor for Different Users

Abstract: The researchers considered the disadvantage of using a Cyber gloves sensor that was always needed a calibration for mimicking a robotic hand. It is simply because human hand dimensions are not standard. For every person that would use the glove to operate a teleportation, there would be a different hand configuration to be able to perform the various tasks. Individual calibration is needed because each human hand has his personal calibration. Therefore, the researchers use Leap Motion sensor with the aid of a professional, high-precision, and fast motion tracking system which is designed to be placed on a physical desktop, facing upward to track human hands and fingers and then the researchers employed vector dot product method for the algorithm in order to acquire data in controlling a robotic hand to mimic the movements of the human hand for different users.

Paper Title: Implementation of Wireless Sensors Networks Wsn Based On the IEEE 802.15.4 (ZIGBEE) Standard in Botanical Gardens

Abstract: This article describes the development and implementation of a Wireless Sensor Network WSN, in the Botanical Garden Reinaldo Espinosa owned by the National University of Loja. The simulator NS2 (Network Simulator V2) was used for this design, which allows to display the results of tests sending packages and power consumption, letting us analyze the advantages and disadvantages of each topology, thus we determined that the star topology is the best option when transmitting in real-time data provided by the sensor nodes. Through the simulation results we proceeded to implement a prototype WSN, based on XBee Pro S2B wireless communication modules, processing and energy units, and temperature and relative humidity sensor. Finally, we show the data to the user with a graphical interface that enables real-time monitoring.
